

# K-12 Educational Facilities

## Consulting Services

Educational facilities require a special kind of attention to detail. At RWB, we understand the importance of how these buildings serve our community and build our future. MEP designs must meet the operational needs of the students and staff, along with the stringent design requirements from school districts or overseeing boards.

RWB has provided MEP consulting services to over fifty different independent school districts with over one thousand successful projects. Our experience includes new construction, additions, renovations, and MEP system upgrades.

## Enlist RWB Expertise to your K-12 Project

With over 30 years of experience, we know that providing an **on-time, on-spec** design is critical. We work diligently to deliver systems that meet or exceed client requirements.

Our team excels and providing **creative** solutions to our clients - uncovering the best solution for the project, not whatever is easiest or what has been done before.

We are proficient in **compliance** requirements for education projects such as current energy code, design requirements for over 50 ISDs, LEED Certification, and CHPS
